

Posterior Predictive Check

Model-predicted intervals should include points served by a point error bounds

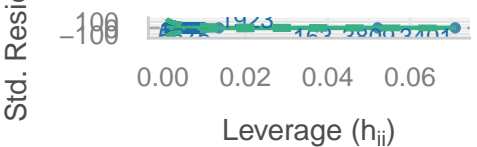

contre_augm_franch_min

● Observed data ● Model-predicted data Within error bounds — no —

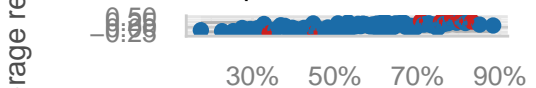

Influential Observations

- Points should be inside the contour lines
- High collinearity (VIF) may inflate parameter estimates

Leverage (h_{ii})

Binned Residuals

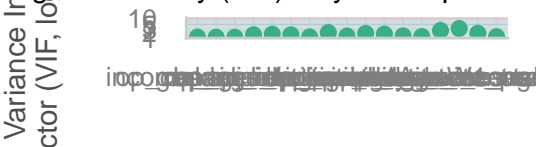

Points should be at points

Estimated Probability of contre_augm_f

Collinearity

High collinearity (VIF) may inflate parameter

[illegible]

● Low (< 5)
